

IAM Vanguard Institutional Index

AS OF 2025-12-31

INVESTMENT STRATEGY: The investment seeks to track the performance of a benchmark index that measures the investment return of large-capitalization stocks. The fund employs an indexing investment approach designed to track the performance of the Standard & Poor's 500 Index, a widely recognized benchmark of U.S. stock market performance that is dominated by the stocks of large U.S. companies. It attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index.

Performance data quoted represents past performance. Past performance is no guarantee of future results. Due to market volatility, current performance may be less or higher than the figures shown. Investment return and principal value will fluctuate so that upon redemption, shares may be worth more or less than their original cost. Performance data does not reflect deduction of redemption fee, which, if such fee exists, would lower performance. For current to the most recent month-end performance information, please log onto myplan.johnhancock.com or call a John Hancock representative at (800) 294-3575.

Portfolio Snapshot^{b2} (%)

^{f1} The Gross Expense Ratio does not include fee waivers or expense reimbursements which result in lower actual cost to the investor. The Net Expense Ratio represents the effect of a fee waiver and/or expense reimbursement and is subject to change. Marketing support services are provided by John Hancock Distributors LLC.

Important Notes

Other:

b2. The portfolio composition, industry sectors, top ten holdings, and credit analysis are presented to illustrate examples of securities that the fund has bought and diversity of areas in which the fund may invest and may not be representative of the fund's current or future investments. The top ten holdings do not include money market instruments and/or futures contracts. The figures presented are as of date shown, do not include the fund's entire investment portfolio, and may change at any time.

Index Description:

i47. S&P 500 Index is a market capitalization-weighted index, composed of 500 widely-held common stocks. This index is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large-cap universe. An investment cannot be made directly into an index.

Principal Risks

Equity Securities: The value of equity securities, which include common, preferred, and convertible preferred stocks, will fluctuate based on changes in their issuers' financial conditions, as well as overall market and economic conditions, and can decline in the event of deteriorating issuer, market, or economic conditions.

IAM Funds: The expense ratio is adjusted to reflect the additional wrap fee of 0.51%.

Index Correlation/Tracking Error: A portfolio that tracks an index is subject to the risk that certain factors may cause the portfolio to track its target index less closely, including if the advisor selects securities that are not fully representative of the index. The portfolio will generally reflect the performance of its target index even if the index does not perform well, and it may underperform the index after factoring in fees, expenses, transaction costs, and the size and timing of shareholder purchases and redemptions.

Portfolio Risk: This is not a mutual fund, prospectuses are not required, and prices are not available in local publications. The portfolio allocates its investments among multiple asset classes, which can include U.S. and foreign equity and fixed income securities. Foreign investing involves risks not associated with U.S. investments, including currency fluctuations and political and economic changes. These risks are likely to be greater for emerging markets than in developed markets. Portfolios that invest in bonds are subject to interest-rate risk and can lose principal value when interest rates rise. The portfolio may also allocate its investments in growth and value stocks, real estate investment trusts, and corporate and U.S. government bonds. Asset allocation does not ensure a profit or protection against a loss. Please note that asset allocation may not be appropriate for all participants particularly those interested in directing investment options on their own. Consider the investment objectives, risks, charges, and expenses of the fund carefully before investing. An investor should examine the asset allocation of the portfolio to ensure it is consistent with their own risk tolerance.

Separate Accounts: The fund is a separate account and is privately offered. Prospectuses are not required and prices are not available in local publications.
